attcq0yp.dat

Could you and Linda work up some cordial letters for each of these folks with a general status, then have me review? Nothing rushed, just over the next few weeks.

Jim, here is a summary of the status of the properties you were asking about:  
Tommy, let's switch out 1420 Idaho (Taylor) from Group 5 and put in the Dedrick property. Karen said that the residents at 1420 Idaho cannot be cleaned until Summer so we have an empty slot.

Courtney,

Here is a brief summary of the properties you requested:

Bauer - property has both interior and exterior contamination. PDI will be scheduled as soon as weather permits. Will be included in removal packet following PDI.

Benefield (pump house) - Combination because VCI in pump house and

Bauer - 203 E Spruce  
Zamora - 44 Pine St

204/Vicks drive

around perimeter of pump house. Again, PDI to be completed as soon as weather permits. Will be included in removal packet following PDI.

Dedrick (911 Croteau) - PDI is completed. It is an interior only house. Probably will not be selected for removal until winter 2004/2005 unless you or Jim request that it is done sooner.

Ramos - both interior and exterior contamination. PDI will be scheduled as soon as weather permits. Will be included in removal packet following PDI.

Let me know if you have any other questions on these properties.
